

# Illusive & Hitachi ID Privileged Access Manager

## Reinforce Privileged Account Security for Deception

Illusive has partnered with Hitachi ID Systems to seamlessly incorporate Privileged Account Management into the deployment and administration of the Illusive Active Defense Suite. The integration with Hitachi ID Privileged Access Manager enhances the security around privileged credential retrieval when managing all tasks within the Illusive Active Defense Suite, and securely enables the agentless distribution of data deceptions, the collection of attacker forensics and the discovery and removal of cached connections and credentials on endpoints. Ultimately, this partnership helps organizations comply with the most stringent security policies for highly privileged administrators when implementing next-generation deception technology.

### With Illusive and Hitachi ID Systems working in tandem, your organization reaps the following advantages:

Temporary passwords on demand for endpoint deception distribution

Harden deception security by eliminating local credential storage

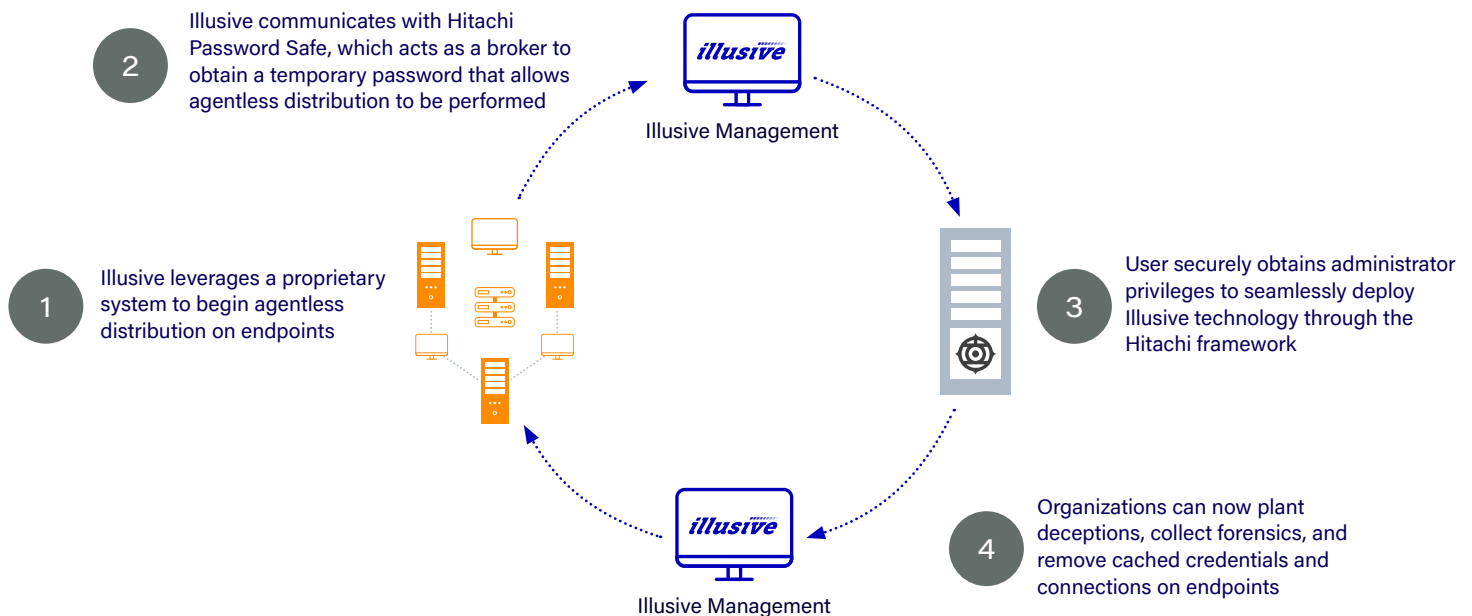

Implement deception with the strictest privileged credential policies

Easily comply with global privileged account standards and procedures

### How Illusive and Hitachi Work Together to Securely Implement Deception

### Inescapable Deceptions within PAM through Illusive and Hitachi ID Systems

Your organization has spent countless years and resources to build an effective privileged access management strategy around Hitachi ID Privileged Access Management, and your deception technology should safely fit inside it. The Illusive Active Defense Suite requires no new hoops for Hitachi ID Systems customers to jump through, and securely blankets the network with deceptions that trick attackers into revealing their presence after a breach.

With the Illusive-Hitachi integration, there is no need for creating new privileged accounts that go around your PAM framework, or for storing fixed credentials for those accounts; temporary credentials can be generated on demand from within the Hitachi ID Privileged Access Management solution your organization is already comfortable using to secure privileged access.

### Illusive and Hitachi ID Systems in Collaboration: Key Benefits

- Add a mutually reinforced security layer to your deception and PAM platforms
- Security without need for fixed credentials to implement deception on endpoints
- No interruptions to PAM protection when deploying deception technology
- Align deception to comply with the most stringent PAM rules and standards

### About Illusive

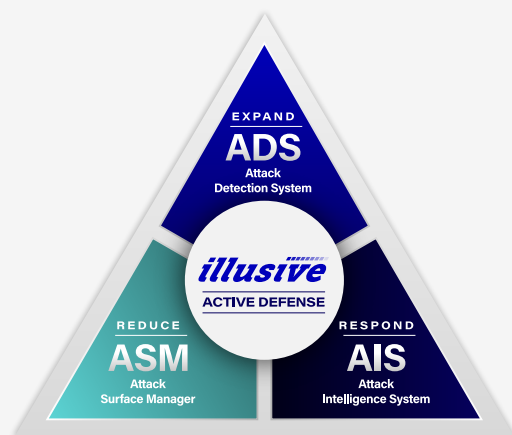

Illusive reduces cyber risk by shrinking the attack surface and stopping attacker lateral movement. Despite significant investments, it's still difficult to see and stop attackers moving inside your environment. Illusive was founded by nation-state attackers who developed a solution to beat attackers. We help Fortune 100 companies protect their critical assets, including the largest global financials and global pharmaceuticals. Illusive has participated in over 130+ red team exercises and has never lost one! To learn more, visit [www.illusive.com](http://www.illusive.com)

Illusive's Active Defense Suite is a vital part of a diversified detection strategy, filling an important attacker lateral movement detection gap in existing perimeter defenses. Each of the products in the Illusive Active Defense Suite play an important role in preventing attackers from achieving their objectives by creating a hostile environment and accelerating the time to detection for an attacker that has established a beachhead.

**Attack Surface Manager (ASM)** continuously analyzes and removes unnecessary credentials and pathways, reducing the attack surface.

**Attack Detection System (ADS)** makes it impossible for attackers to move laterally by transforming every endpoint into a web of deceptions.

**Attack Intelligence System (AIS)** delivers human readable on-demand telemetry for current attacker activities to speed investigation and remediation.

### About Hitachi

Hitachi ID Systems, Inc. delivers Identity and access management (IAM) solutions to organizations globally, including many of the Fortune 500 companies. The Hitachi ID Identity and Access Management Suite is a fully integrated solution for managing identities, security entitlements and credentials, for both business users and shared/privileged accounts, on-premises and in the cloud.

The Hitachi ID Suite is well known in the marketplace for high scalability, fault tolerance, a pragmatic design and low total cost of ownership (TCO). Hitachi ID is recognized by customers and analysts for industry leading customer service.
